

## Field Implementation Finishes in Botswana's BAIS V Survey

The fifth Botswana HIV/AIDS Impact Survey (BAIS V) has successfully completed field data collection, and teams have demobilized out of the field. BAIS V reached nearly 20,000 participants, more than 13,500 households, and completed more than 10,000 household interviews. Several of the principal investigators sent thank you messages to the BAIS V team, which are viewable at the link below.

## Maximizing Data Use through STATA Training in Nigeria

Ciheb Nigeria, in partnership with the Federal Ministry of Health, recently facilitated a training to promote a culture of data demand among stakeholders. This was done to encourage the use of data on the National Data Repository (NDR) to track program outcomes and impact. The training also aimed to build the capacity of the stakeholders to maximize the use of data on the NDR for research.

## In Kenya, Ciheb Efforts Recognized in Nairobi County CQI Awards

During the summer, the Nairobi Metropolitan Services (NMS) held its annual Health Service Delivery Awards to recognize best-performing health facilities in Nairobi County. Facilities supported by PACT Endezeza won awards in all categories they participated in. NMS evaluated facilities based on their performance in continuous quality improvement metrics.

## COVID-19 Symptoms Monitoring App Supports PHIA Surveys

COVID-19 created unforeseen challenges to the population-based HIV impact assessments (PHIAs) that threatened the health of survey staff and participants and also required daily symptom monitoring. In response, Ciheb developed the UMB PHIA Companion Tool, a COVID-19 symptom screening app, to support COVID-19 risk mitigation compliance for staff to use daily before training and field activities.
