

## Ciheb Launches Ambitious COVID-19 Seroprevalence Study in Nigeria

More than 200 staff are being rapidly deployed across three Nigerian states—Enugu, Nasarawa, and Gombe—to complete a new COVID-19 seroprevalence survey in less than two-months' time. The teams will survey 2,040 randomly selected dwellings in rural and urban settings of Nigeria, with approximately 10,200 participants of all ages sampled from selected households.

## Five-Year Study in Kenya will Determine Best Strategies for Smoking Cessation for People Living with HIV

Ciheb in Kenya is conducting a five-year study in Nairobi focused on smoking cessation among people living with HIV (PLHIV). This population is associated with a greater likelihood of cigarette smoking and use of smokeless tobacco, and in Kenya, PLHIV are three times more likely to smoke than the general population.
